EUR	64.900

Beskrivelse

Exclusive 730 divided toilet wagon with beautiful details.

The wagon raises the level of any event, ideal for large events, festivals, corporate events, VIP areas, rental companies that want something out of the ordinary.

With a combination of modern technology, high capacity and complete design, this toilet wagon gives guests an experience of comfort from the moment they step up the wide stair entrances illuminated by LED lights and with automatic sensor doors.

Inside, you are greeted by an elegant atmosphere. Foiled surfaces provide colorful walls, floors and ceilings. Together, this gives a warm and exclusive expression.

The toilet wagon is divided into men's/women's. In one part of the wagon there are 3 toilets and 2 glass sinks. In the other part there is 1 toilet, 3 urinals and 2 glass sinks. Both sides have heating panels and Dyson hand dryers, which provide a touch-free user experience.

The wagon is equipped with a vacuum system that ensures efficient operation, minimal water consumption and easy connection.

A vacuum toilet is particularly suitable for festival and market sites. In the bowl you will find a smaller exit hole than in other toilet types. This is because a vacuum toilet “sucks” the waste from the bowl instead of flushing. A vacuum toilet uses minimal water, and a toilet flush therefore only uses approx. 0.4 L.

A vacuum toilet does not require any waiting time and can be used again directly after previous use. A vacuum toilet thus has a large capacity and can accommodate approx. 75-95 people per hour or approx. 350 toilet visits before the water tank needs to be filled again.

The wagon is emptied simply by opening the valve to the tank or by suction such as a sewage vacuum cleaner.

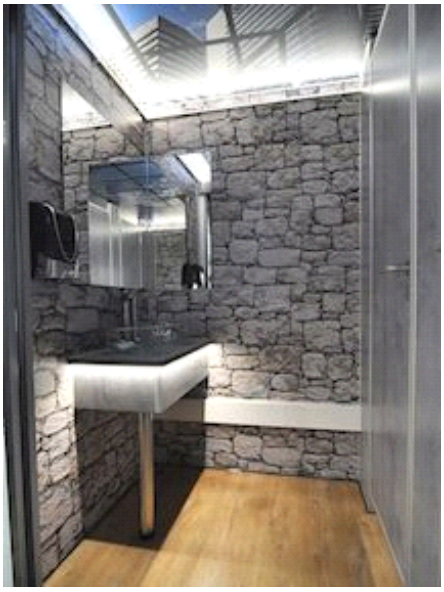

The wagon contains 2 tanks – One for clean water and one for dirty water. By pressing the flush button, the vacuum pump is activated and the waste is drawn through the pump and into the waste water tank. The cart therefore does not require a sewer connection and can therefore be easily placed. The vacuum pump requires electricity.
